2. Screenshots and Demo..... 5

1. Testing

1.1 Test Mandatory Enforcement

The Incident form was tested by setting the Impact field to High and leaving Assigned To empty.

Expected Result

- Assignment Group becomes mandatory.
- Urgency becomes read-only.
- Urgency is automatically set to High.
- Saving the Incident without Assigned To is prevented.

Screenshot

The screenshot shows the ServiceNow Incident form for 'INC0010016'. The form is titled 'Incident - Create INC0010016'. The 'Impact' field is set to '1 - High', which triggers a UI policy that sets 'Urgency' to '1 - High' and 'Priority' to '1 - Critical'. The 'Assigned to' field is empty, and a red error message is displayed: 'Assigned To is mandatory for High Impact Incidents.' The 'Assignment group' is set to 'Software'. The 'Short description' is 'testing UI policy.' and the 'Description' is empty. The 'Channel' is set to '-- None --' and the 'State' is 'New'.

Figure 1: Testing mandatory enforcement for a High Impact Incident

1.2 Test Successful Save

The Assigned To field was filled with a valid user and the Incident was submitted.

Expected Result

The Incident is saved successfully without the validation error.

UI Policy Action
New record

UI policy actions specify exactly what actions to take on a specified field. The conditions specified in the UI policy determine when these actions are triggered. [More Info](#)

UI policy: High Impact Control

Table: Incident [Incident]

* Field name: Urgency

Application: Global

Mandatory: Leave alone

Visible: Leave alone

Read only: True

Clear the field value ☐

Submit

Figure 2: Successful Incident save after assigning a user

1.3 Reverse Condition Test

The Impact field was changed from High to Medium.

Expected Result

- Assignment Group is no longer mandatory because of the UI Policy.
- Urgency becomes editable again.
- The Incident can be saved successfully.

1.4 Test List Edit Blocking

An attempt was made to change the State field directly from the Incident list.

Expected Result

An alert message is displayed and the State change is blocked.

Screenshot

1.5 Test Form-Based Update

The State field was changed directly from the Incident form.

Expected Result

The State change is saved successfully.

2. Screenshots and Demo

The project demonstration consists of screenshots showing the configuration and testing of the ServiceNow Incident controls. The screenshots included in this documentation demonstrate:

- UI Policy configuration
- UI Policy Actions
- Client Scripts
- High Impact behavior
- Mandatory field enforcement
- Successful Incident submission
- Reverse condition behavior
- List editing restriction
- Form-based State update

The complete project can be demonstrated using the configured ServiceNow Incident instance.
